

Filerun Issue with sort order and thumbnails

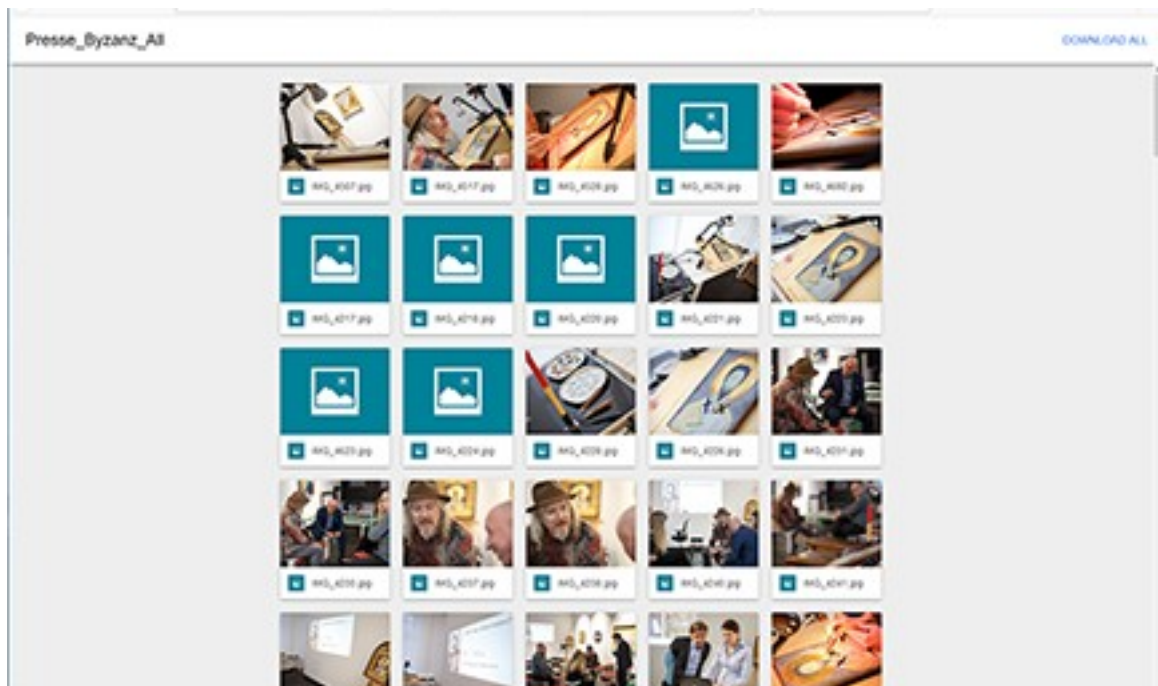

In Filerun Thumbnails created without ImageMagick.
Same picture after picture reload.

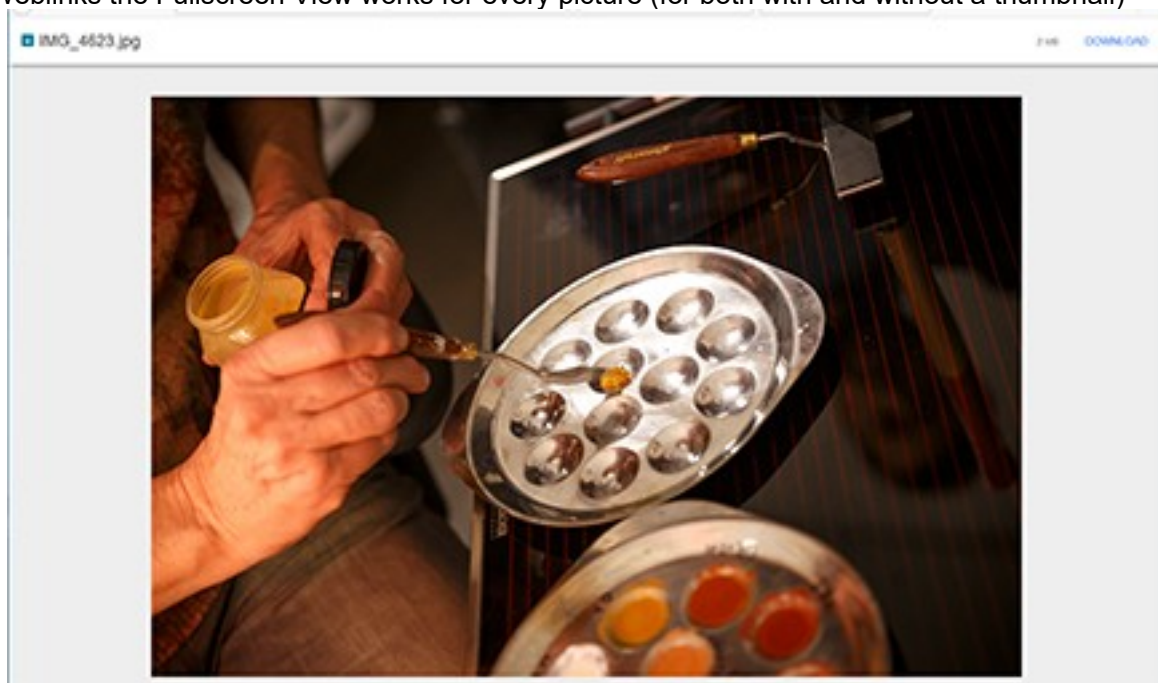

Opening Image in FileRun View:

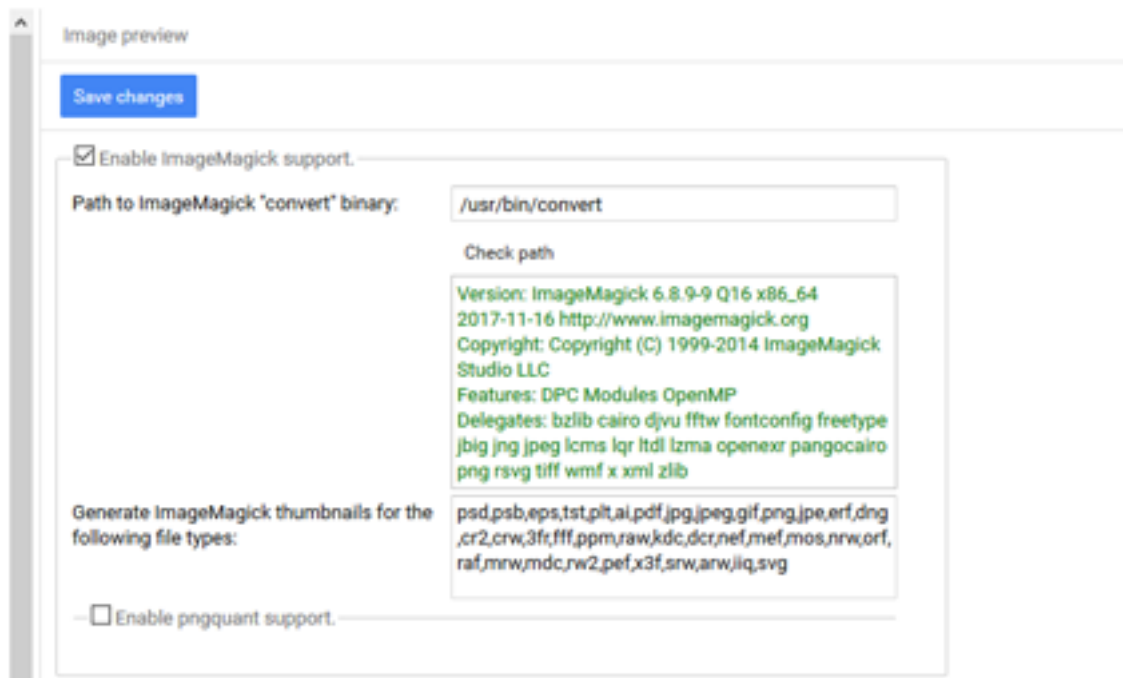

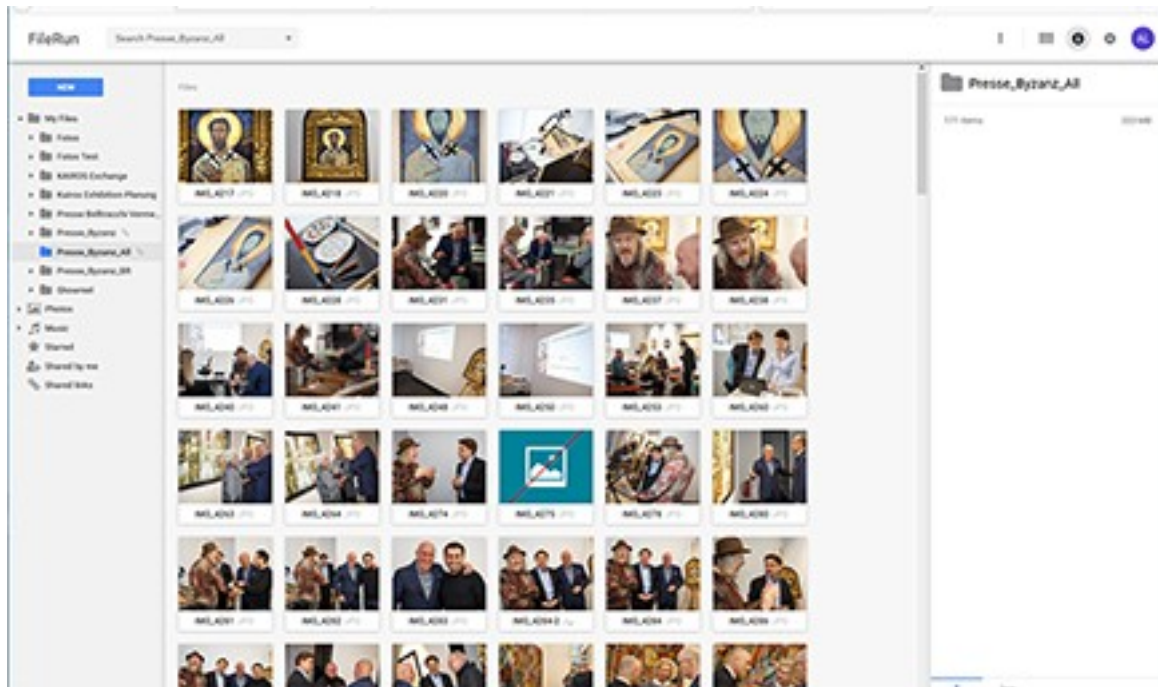

Shared Links without ImageMagick:
Looks different but this has to do with the chaotic sort order!! Unsolved Problem!

On Weblinks the Fullscreen View works for every picture (for both with and without a thumbnail)

Thumbnails created with ImageMackick (Preinstalled on 1&1 shared hosting):
After multiple page reloads every thumbnail is generated.

All pictures are jpg images. With a resolution of 3000 x 2000 pixels.
And an average size of 2 MB.

These jpegs are created by Adobe Photoshop.
I attached one of the jpegs: IMG_4623.jpg
